

iPhone (iOS): How to get an icon for your WebApp on your phone

Step 1

Open the WebApp : eg from RH homepage alert, from newsletter link, or just put <https://www.rotherhamharriers.org/cocheck/> into your browser

Step 2 Find this icon and click it

Drop down the resulting panel and select 'Add to Home Screen'

You can probably type a name for it as part of the process

The icon will probably look like a small version of this picture

The above is iOS, Android does it a different way

I understand that Androids are similar to each other

(advice welcome if not correct)

Android phone: How to get a link for your WebApp on your phone

Step 1

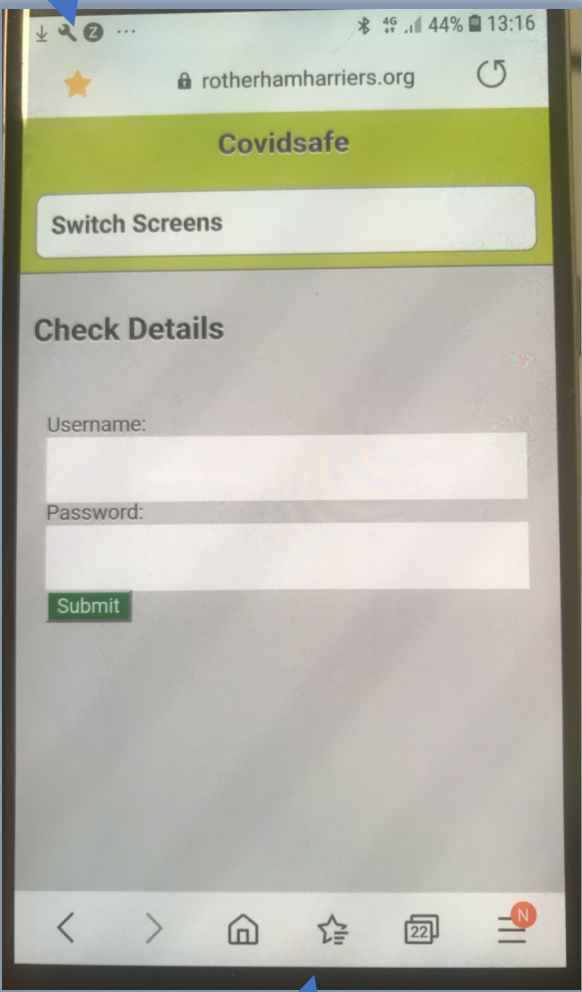

Open the WebApp : eg from RH homepage alert, from newsletter link, or just put <https://www.rotherhamharriers.org/cocheck/> into your browser

Step 2

This star will be white at first

Click it to save a bookmark for this app (website) (this is yellow showing it already done)

Only do this first time you visit

Step 3 Click this lower bookmark icon

A panel showing your saved bookmarks drops down: see example below

Click the bookmark named here 'covsafe'
It will launch
The WebApp will stay reachable in future
